

27/12/22

HTML

Hyper Text Markup Language

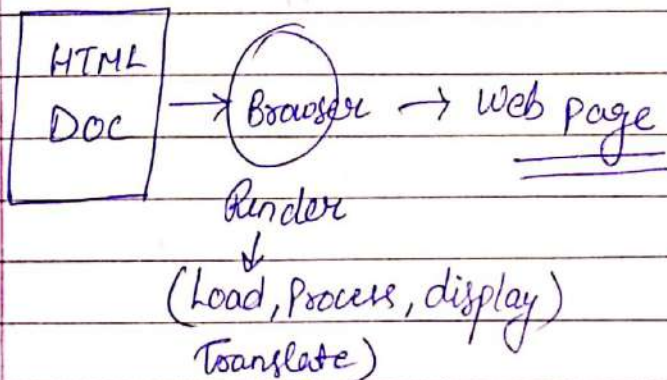

One web page is linked to another page.

Annotations
Tags
markup content / show content

HTML :- → Basic Building Block
→ Skeleton
→ Description of web page.

CSS → formatting / Appearance.

JS → functionality.

* TAGS :- Tag is a something that tells ^{to Browser} how to render different elements.

→ Tag is an Annotation that tells to Browser how to render different elements.

<p>	<h1>		<a>
Paragraph	heading	Image	Link

$\langle \text{Open Tag} \rangle + \text{Content} + \langle \text{Close Tag} \rangle \rightarrow \text{Element}$

HTML Doc can be opened in 2 ways —

- Text Editor.
- By Browser.

* HTML Text Element

BLOCK Elements

`<p>`
`<h1>` to `<h6>`
`` / ``
`<article>`
`<section>`

INLINE Elements

`` (emphasize)
``
`<a>`

highlight Text
Color Text

→ Block elements are elements/tags that divides a web-page into blocks.

→ INLINE Element:- They are used to differentiate specific part of Text.

[MDN Web Docs](#)
[W3 Schools](#)

- * `<div>` is a container tag. We can customize it accordingly.
- * ID is the name of element.

* Reading of Documentation

MDN Web Docs

* Empty Tag (Self closing Tag)

ex:- `
` Line break.
`` image.
`<input />` for input

Tags:- `<!doctype>`, `<h1>` to `<h6>`
`<html>`, `<p>`
`<body>`, `
`
`<div>`

LIST

→ Ordered List. 1 2 3

→ Unordered List. : 3

→ Description List. (H.W.)

1:25 hrs

CLASSTEAM Page No.
Date / /

Attributes are properties or features of a tag that provide additional information.
ex:- ``
src, width, Height are attributes.

* ALL HTML Elements can have attributes.

Exception:-

id → all elements (applicable) '#' use with (id)
class → all elements (applicable) '.' use with (class)
src → img
href → a tag (<a>)

ex:-

```
<html>
<style>
  #love {
    colour: red;
  }
  .Nike {
    colour: aqua;
  }
</style>
<body>
  <div id="love"> Kyaaal hai </div>
  <div class="Nike"> Brand </div>
</body>
</html>
```

✓ HW Question:-

Q. What happens when we close an empty tag?
Ans. Adding the closing tags to the empty elements will be invalid syntax.

Q. What is Description list?
Ans. <dl> tag description list.

The element encloses a list of groups of terms and descriptions (<dt> and <dd>).

Ex:-

<p> Cryptids of Cornwall:- </p>

<dl>

<dt> Beast of Bodmin </dt>

<dd> A large feline inhabiting Bodmin Moor </dd>

<dt> Morgawr </dt>

<dd> A Sea Serpent </dd>

<dt> Owlman </dt>

<dd> A giant owl-like creature. </dd>

</dl>

Output:

Cryptids of Cornwall:- Beast of Bodmin A large feline inhabiting Bodmin Moor Morgawr Sea serpent

Snippet Abbreviation

press ! + enter

(1) `<!DOCTYPE HTML>`

Tells your Browser that it's an HTML v5 doc.

(2) `<HTML lang="en">`

Tells Content of web page is in English.
for Indian English :- en-IN.

(3) `<html>`

`<head>` `</head>`

`<body>`

`</body>`

`</html>`

Actual Content

Metadata of HTML doc

data about data

HTML DOC

- title
- Character Set
- view post
- style
- script
- other metadata

(4) Meta Tag :-

→ Defines Meta data about HTML doc.
→ Always go inside Head Tag.

→ used to Specify :-

- * Character Set.
- * Page description
- * Keywords
- * Author
- * Viewport.

→ Meta data never displayed to the User.

(5) `<meta charset="UTF-8">`

UTF-8 → Character Encoding (like ASCII extended)
→ 90% web pages used. (Standard)
→ It is Variable length Encoding.

(6) `<meta name="viewport" content="width=device-width, initial-scale=1.0">`

device of display screen

Controls Zoom-Level when Page loaded.

* Anchor Tag

``

* Target → `[-self]` : the current browsing context. (Default)

→ `[-blank]` : usually ^{open} a new tab.

→ `[-parent]` : the parent browsing context of current one. If no parent, behaves as `-self`.

→ `[-top]` : the topmost browsing context. If no ancestors, behaves as `-self`.

Example :-

``
Open into new Tab

Image Tag

``
`height="100px", width="100px".` (By default 'px')
`height=50, width=50`

<hr> — Horizontal Rule

* Poet Problem

OR

`<PRE> tag` में जैसे लिखेंगे ऐसा ही print होगा

```
<pre>
yaar deha
superstar
desi
kalakar
```

`</pre>`

* ~~HTML~~ INLINE CSS

`<p style="color: brown"> Hello Everyone </p>`
`<p style="background-color: Aqua;"> Hello Everyone </p>`
`"font-family: fantasy;"`

* Text Align

`text-align: start;`
`text-align: end;`
`text-align: center;`
`text-align: justify;`

Formatting Text Tags

` bold `
`<i> italic </i>`
`<small> for small text </small>`
` Delete ` Delete (Strike)
`<mark> Mark </mark>` Highlight text ✓
`^{Superscript}`
`_{Subscript}`

Quotation & Citation Tags

`<blockquote>`
`<q>`
`<cite>`
`<address>`
`<abbr>`

for long Quotation

CLASSTEAM Page No. _____
Date / /

(i) <blockquote> : Block Quotation tag.

This indicates that the enclosed text is an extended quotation for long quotation.

A URL for the source of the quotation may be given using the "cite" attribute.

While a text representation of the source can be given using the <cite> element.

ex:-

```
<figure>
<blockquote cite="https://www.huxley.net/bmw.html">
  <p> Words can be like X-rays </p>
</blockquote>
</figure>
```

(ii) <q> tag :- This tag indicates that the enclosed ~~tag~~ text is a short inline quotation.

It is used for short quotation that don't require paragraph breaks.

```
<q cite="https://www.imdb.com/quotes"> I'm sorry, Dave,
  I'm afraid I can't do that </q>
```

(iii) <cite> :- The Citation element.

It is used to describe a reference to a cited creative work, and must include title of work.

```
<cite><a href="http://www.george-orwell.org.html">
```

Nineteen Eighty-four </cite>

ex:-

First Sentence in Nineteen Eighty-four by George Orwell

(iv) <address> indicates that the enclosed HTML provides contact information for a person/people or for an organization.

ex:- <address>

```
<a href="mailto:jimrock.com"> </a> <b>
<a href="tel:+123456"> (123)-456-2368 </a>
</address>
```

(v) <abbr> represents an abbreviation or acronym.

ex:- <p> <abbr> CSS </abbr> (Cascading Style Sheets)
 <abbr> HTML </abbr> Hyper Text Markup Language
 </p>

* The Element

It is an inline container used to markup a part of a text, or a part of a document.

 has no required attributes, but style, class and id are common.

Ex:-

```
<p> I am <span style="color: green;"> green  
</span> </p>
```

Output: I am green.

HTML TABLES

Tag	Description
<table>	defines a table.
<th>	a header cell
<tr>	a row in a set table.
<td>	a cell in a table.
<caption>	defines a table caption.
<thead>	Groups a header content in a table.
<tbody>	Groups a body content in a table.
<tfoot>	Groups a footer content in a table.

→ A Simple HTML Table

```
<style>  
table, th, td {  
    border: 1px solid black;  
    border-collapse: collapse;  
}
```

```
</style>
```

```
<table>
```

```
<tr>
```

```
<th> Company </th>
```

```
<th> Contact </th>
```

```
</tr>
```

```
<tr>
```

```
<td> Codehelp </td>
```

```
<td> Babbar </td>
```

```
</tr>
```

```
</table>
```

Company	Contact
Codehelp	Babbar

* Table Cells

```
<td> ---- </td>
```

Love	Babbar	Codehelp
------	--------	----------

* Collapsed Table Border

border-collapse: collapse;
border: 1px solid black;

following values are allowed:- (Border)

dotted, dashed, solid, double,
hidden, groove, ridge, inset.

* border-color: red;

* Round Table Border

border-radius: 10px;

* Table Color:-

th, td {
background-color: cyan;
}

* HTML TABLE SIZE

Table can have different sizes for each row, column or entire table.

→ Row Height

To set the height of a specific row, add the 'style' attribute on a table row element.

Example:-

```
<table style="width: 100%;">
<tr>
<th> Fname </th>
<th> Lname </th>
</tr>
<tr style="height: 70px;">
<td> Ankit </td>
<td> Sharma </td>
</tr>
<tr>
<td> Love </td>
<td> Babbar </td>
</tr>
</table>
```

Output:-

Fname	Lname
Rishabh	Sharma
Love	Babbar

* Column Width

```
<table style="width: 100%; ">
  <tr>
    <th style="width: 70%; "> Frame </th>
    <th> Lname </th>
  </tr>
  <tr>
    <td> Rishabh </td>
    <td> K </td>
  </tr>
  <tr>
    <td> Love </td>
    <td> B </td>
  </tr>
</table>
```

Output:-

Frame	Lname
Rishabh	K
Love	B

<caption> Tag

Specifies the (option or title) of a table.

<caption> Time table </caption>

Attribute in CSS:-

Caption Side : bottom ; / left ; / right ; / top ;

Cell Padding

It is the space between the cell edge and cell content.

By default, padding = 0.

Ex:-

```
th, td {
padding: 50 px;
}
```

Output:-

XYZ

Cell Spacing

It is the space b/w each cell.

By default, space = 2px.

Ex:-

```
table {
border-spacing: 50 px;
}
```

Output:-

Colspan & Rowspan

Colspan:- To make a cell span over a multiple column,

Ex:-
 <th colspan="2"> Name </th>
 <th> Age </th>
 <tr>

<td> Love </td>
 <td> Babbar </td>
 <td> 25 </td>
 </tr>

Output:-

Name	Age
Love Babbar	25

Rowspan:-

To make a cell span over multiple rows.

<tr>
 <th> Name </th>
 <td> Ankit </td>
 </tr>
 <tr>
 <td colspan="2"> phone </td>
 <td> 100 </td>
 </tr>
 <tr>
 <td> 112 </td>
 </tr>

Form Tag / Input Tag / Button Tag

<input type="text">
 <input type="radio">
 <input type="checkbox">

Ex:-

<label for="username"> Username: </label>
 <input type="text" name="username">

Username:

<button> Submit </button>
 <input type="submit" value="Submit">

→ Question:-

Welcome To CodeHelp

Username:

Password:

<h1> Welcome To CodeHelp </h1>
 <form action="https://www.thecodehelp.in">
 <label for="username"> Username: </label>
 <input type="text" id="username">

 <label for="password"> Password: </label>
 <input type="password" id="password">

 <input type="submit" value="Submit">
 </form>

<colgroup> tag :- Provides styling in group of columns.
 To defines a group of columns within a table.

Attribute :-

span :- This attribute contains a positive integer indicating the number of consecutive columns the <colgroup> element spans.
 its default value is 1.

used in <col> element.

align, bgcolor etc.

ex:-

<table>
 <colgroup>

<col span="1" style="background-color: aqua;"
 <col span="1" style="background-color: greenyellow;"
 <col span="1" style="background-color: red;"

</colgroup>

<tr>

...

...

</table>

Hide Column :- style = "visibility: collapse"

* No color on specific column, use:-

<col span="1" >

* How To HIDE columns in a Table?

<col span="1" style="visibility: collapse;" >

* Note :- Rowgroup does not exist because we can do styling inside <tbody> tag, <thead>, <tfoot> tag.

<figure> and <figcaption> tags

<figure> represents self-contained content, potentially with an optional caption.

<figcaption> caption or Title of figures.

examples:-

```
<figure>
  
```

```
<figcaption> A photograph of Linux </figcaption>
```

```
</figure>
```

A photograph of Linux.

NOTE :- Example of Blockquote & Cite & Quotation

```
<blockquote>
```

```
<p> linux </p>
```

```
<cite> References / Authors / creators </cite>
```

```
</blockquote>
```

* Characters & Symbols (Important)

- * Copyright Symbol : ©
- * Dollar Symbol : $
- * Ampersand : &
- * Greater than : >
- * Less than : <

5/1/23

links → Bookmarks / ~~phone~~ mail

div tag → div vs span

Semantic tags

HTML IV Extra class

* Click here

* Call me
for calling via facetime app.

* mail me

for use id → #
for use class → .

Important Notes:-

① For Calling via Link

`Call Me `

② For Mailing via Link

`Mail Me `

③ BOOKMARK

→ HTML Links can be used to create bookmarks, so that readers can jump to specific parts of a web page.

→ Bookmarks can be useful if a web page is very long.

→ Example :- Concept of Bookmark

Bookmark → dest → id
text → href = "#id"

→ for Smooth transition :-

```
<style>
html {
  scroll-behavior: smooth;
}</style>
```

example:-

- we have to jump directly over Achievement & Resources.
- firstly, we use "id"s for Achievement & Resources
- Then create links for id of Achievement & Resources at top bar of web page.

~~`<h2 id="Achieve">Achievements </h2>`~~

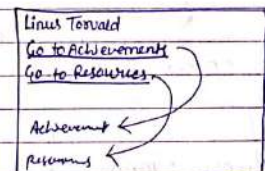

`<h1> Linux Torvald </h1>`

`Go to Achievements `

`Go to Resources `

`<h2 id="Achieve"> Achievements </h2>`

`<h2 id="Resource"> Resources </h2>`

for Smooth Transition

```
<style>
html {
  scroll-behavior: smooth;
}
</style>
```

<div> Tag - Division Tag (Block element)

Divide the pages of web into sections having differentiate.

It is a generic tag Container tag use anywhere.

```
<div> 1 </div>
<div> 2 </div>
<div> 3 </div>
<div> 4 </div>
```

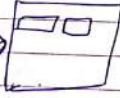

It contains other tag also.

It can be applied on `<p>`, ``, any other tags.

By default:- `display: block;` (because it is block element)

* We can do inline

`display: inline;` 

 tag

span tag is same as div tag but it is an Inline element.

By default CSS:-

`display: inline;`

example:-

```
<span> 1 </span>
<span> 2 </span>
<span> 3 </span>
```

→ Single line →

* We can do:-

`display: block;`

`<div> tag` → `display: inline;` = ` tag`. Yes.

` tag` → `display: block;` = `<div> tag`. Yes.

Semantic Tags :- Use for good practice
 Don't have visually change
 That provide meaning of the content.

examples of Semantic Tags

<table> tag, <header>
 <form> tag, <footer>
 <section> tag, <main>
 <article>, <nav>
 <aside>, <p>
 <figure>
 <figcaption>

div > span > Non-Semantic tag

which tells nothing about content.

<p>, <article>, <section>
 ↓ ↓ ↓
 only one multiple multiple
 Paragraph Paragraph, Section like
 P, P, P, heading, h1 Head, Bio, Itch
 Res.
 Independent Text

(i) Section tag :- define section in your document

(ii) Article tag :- Independent text. heading, paragraph, footer etc.

Ques:- Can we use <section> tag inside <article> tag. or Vice-Verisa

<article>
 <section> <section>
 <article>

YES

<section>
 <article> <article>

YES

Ques

Header tag :- It is used in Introductory part of web doc.
 ~~text~~ Headings, logo, title etc.

Important Question

Q → What is difference b/w <header> and <h1> tags?

Ans

The Header Element :- Contains any items that should contain introductory information and often includes things like h1 elements, logos, and things about author or company, navigation bar.

H1 element stands :- for heading and help to structure your document and tell web browser readers to importance of that element.

Q → Can we use ~~if~~ `<header>` tag inside `<footer>` tag?

Ans Footer is a semantic tag that is used to represent the footer of a page, we can use the footer inside header tag.

Intentionally, we are then writing semantically incorrect code which can cause problems for search engines optimization.

Q → Can we use Multiple `<header>` tags?

Ans We can use multiple header for the same page by giving all the section of that webpage their own header element.

(iv) `<footer>` tag :- Information about author, Copyright, Terms of use, privacy policy, Refund policy etc.

(v) `<nav>` tag :- used for navigation links.

```
<nav>
  <a _____> </a>
  <a _____> </a>
  <a _____> </a>
</nav>
```

(vi) `<aside>` tag :- used to show some special ^{Surrounding} content on a side.

ex:- Notes, ads, summary, Do you know? etc.

CSS property:-

```
float: right;
width: 40%;
```

(float, left, we can set, 60/20/11)

Q → Can `<aside>` tag content be in center?

Ans Yes, `aside` {
margin: auto;
width: 50%;
text-align: center;
}

(vii) <main> tag :- This tag specifies the main content of a document.

It should not contain any content that is repeated across documents such as sidebars, navigation links, copyright, site logos etc.

Note :- There must not be more than <main> element in a document.

The <main> element must NOT be a descendant of an <article>, <aside>, <footer>, <header> or <nav> element.

Ques Difference b/w <body> and <main> tag?

Ans <Body> tag is used to enclose all the content represented on browser, Thus, it contains main, sidebars, nav, footer etc.

<main> tag is used to represent only main content of the page, so it doesn't contain sidebars, nav, footer etc.

Favicon

A favicon is a small image displayed next to the page title in the browser tab. After <title> element.

How to Add favicon

<head>

<title> My page </title>

<link rel="icon" type="image/x-icon" href="favicon.png">

</head>

<Link> tag

defines the relationship between the current document and an external resource.

<link> is most often used to link to external stylesheets or to add a favicon to your website.

It is an empty element, it contains attribute only.

Attributes :-

href → URL

media → media-query

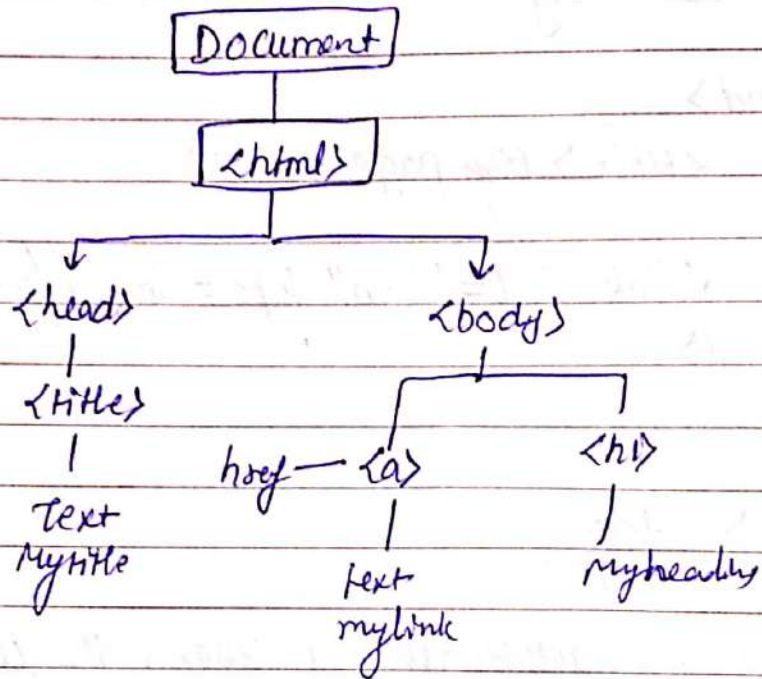

rel → Required. (relations b/w current & linked document)

type → icon/media-type

DOM in HTML

Document Object Model

defines structure of HTML doc.

Example :-

<Section>
 <article>
 <section>
 <p> -- </p>
 </section>

 <a>
 <p> </p>
 </article>
 </section>
